

# Email

Email is not intended as a standalone application but is a service that is called up when files and folders are shared via email. To do so, use the context menu in the file explorer or when viewing an album and share the files via email. The system then creates an email message that includes an invitation to view the files or albums with a hyperlink that the recipient can click on.

Button	Function	Description
	<b>Send</b>	Send out email message.
	<b>Sender</b>	By default, this field is populated with the email address that you have setup under <a href="#">Preferences &gt; Email</a> .
<b>Receiver</b>	<b>Add Contacts</b>	Click <b>Receiver</b> to add contacts from your address book or manually enter an e-mail address.
	<b>Subject</b>	Enter a subject for this email message.

To send out invitations by email, make sure to setup the email preferences first. For more details, see [Preferences > Email](#).
