# Image Viewer

When you open an image in the file explorer, the image viewer opens automatically and displays the image. It also creates a list of all the other images in the same folder in the preview pane, so that you can view them at the same time.

| Button | Function | Description |
|---|---|---|
|  | **Back** | Go back to previous image. |
|  | **Forward** | Go forward to the next image. |
|  | **Zoom In** | Zoom in on the image. |
|  | **Zoom Out** | Zoom out of the image. |
|  | **90° CW** | Rotate the image 90° clockwise. |
|  | **90° CCW** | Rotate the image 90° counterclockwise. |
|  | **Slide Show** | Start and stop the slideshow. This will display all the images in the same folder and automatically change to the next image at an interval of 6 seconds. Click **Slide Show** again to stop the slideshow. |
